

The Engineering Institute of Canada held the first Climate Change Technology Conference in Ottawa in 2006. The event gathered engineers, scientists, policy makers, and professionals involved in a wide range of industries from across Canada to discuss methods and technologies to mitigate climate change. The 2009 conference continues with the theme.

Climate Change: Deal With It!

The conference will be held on McMaster University's scenic West Hamilton campus. Technical sessions will be located in the new Michael DeGroot Centre for Learning and Discovery (MDCL) while exhibits and lunch will be take place in the recently completed David Braley Athletic Centre (DBAC).

CCTC 2009 will also provide an opportunity for exhibitors to share their products and services related to climate change technology, modeling, policy, education, monitoring, mitigation, adaptation, etc. with conference attendees.

Please return the completed form in order to reserve an exhibitor's space for your company.
